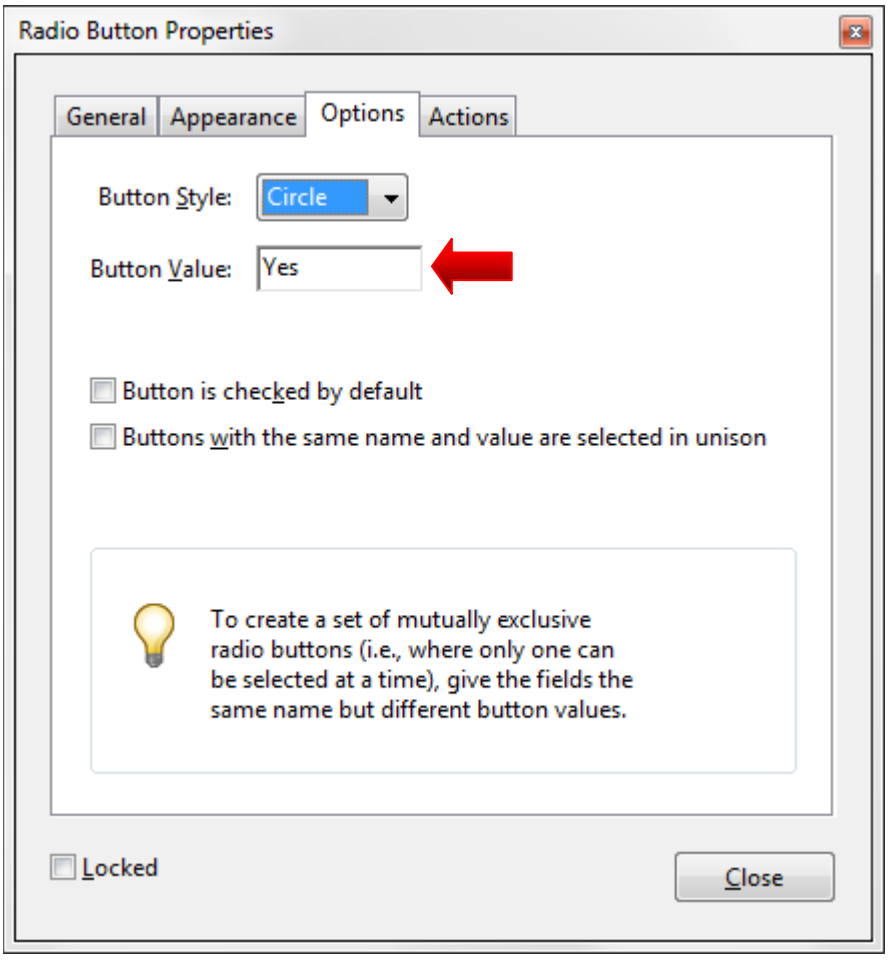
Filling Radio Buttons using AutoMailMerge

This is a radio button group named “Radio Buttons”

- This is a radio button with “Yes” button value
- This is a radio button with “No” button value
- This is a radio button with “Do not know” button value

Use “Radio Button Property” dialog in Acrobat form editor to set a button value of a radio button:



Map “Radio Buttons” PDF form field to a data source field that holds data. Make sure that data in this field contains only “Yes”, “No” or “Do not know” text. If the data source contains other text/values, then change button values of the corresponding radio buttons using “Radio Button Properties” dialog to match the data. The only requirement is to have the same text for button values and data source values.
